- Preservatives (Diazolidinyl Urea, Methylparaben, Propylparaben, Phenoxyethanol)
- Aromas
- Aqua
- Glycerin
- Colorants
- Boric acid

Weight: 160g

Effective and fast cleaning compound for HiFi equipment!

High-tech cleaning compound for cleaning of highly textured surfaces and interstices, which can't be reached with regular cleaning solutions. Removes deeply sitting dirt and germs on all surfaces without leaving residues. Does not give out moisture and therefore is especially capable of cleaning sensitive surfaces and electronics.

Do not rub, just gently roll the compound over the surface you want to clean. Do not use on oily and/or wet surfaces! Before use, wash your hands with soap and use with dry hands. Multiple use until the maximum absorption capacity is reached. Replace your HiFi Clean when it becomes sticky, but no later than eight months after first application.
